

The assignment

Kraatz has been approached by numerous clients to add cutting to the various range of services. After careful selection of the right machinery we can now say we have acquired a “state-of-the-art” plasma cutter. We can offer our clients turn-key projects including cutting, metal forming, fabrication and surface treatment, substantially adding to local content manufacturing.

Getting the job done

Our plasma cutter gives our clients the option to cut plates up to 75mm thick. We have the latest high precision cutting technology from the plasma cutting world leader included in our machine. Whether mild steel CS, high tensile CS, Stainless Steel, Aluminium or quenched and tempered steel we can do it.

Key learnings

Kraatz listens to its customers and we are able to work according to world’s standards.
